Netflix, 2012: the winning blend did not ship

This weekend: Friday 14:00, gradient descent

Netflix put the two strongest prize models into production: a matrix factorization and a neural network.

Amatriain and Basilico (Netflix), Netflix Tech Blog, 6 April and 20 June 2012. Funk, blog, 11 December 2006.

Netflix, 2012: the winning blend did not ship

This weekend: Friday 14:00, gradient descent

Netflix put the two strongest prize models into production: a matrix factorization and a neural network.

Result, on hidden ratings

8.43% *107 models, 2007*

10.06% *hundreds of models, 2009*

Netflix, 2012: the winning blend did not ship

This weekend: Friday 14:00, gradient descent

Netflix put the two strongest prize models into production: a matrix factorization and a neural network.

Result, on hidden ratings

8.43% *107 models, 2007*

10.06% *hundreds of models, 2009*

What it cost

Built for 100 million ratings, the models had to learn from more than 5 billion, and keep learning as members rated.

Result, on hidden ratings

8.43% *107 models, 2007*

10.06% *hundreds of models, 2009*

What it cost

Built for 100 million ratings, the models had to learn from more than 5 billion, and keep learning as members rated.

What Netflix decided

Ship those two. The winning blend's extra accuracy did not seem worth the engineering.

Which technique answers which question

The business question	*The technique*	*The cases*
Which products, or clients, are like this one?	Nearest neighbours	*Airbnb, 08:00 also LinkedIn, Pinterest*
Which unseen product will this client want?	Matrix factorization	*Netflix, 10:00, 14:00 also Spotify*
Which option to use, while still learning which works?	Bandits	*Adyen, 12:00 also Yahoo, Microsoft, Spotify, Amazon*
